

The Original

The compressed pop-up sponge VISKOVITA is an internationally successful product in the printing industry. Because of its outstanding properties, it is eminently suited for cleaning printing plates. Visually, it stands out for the skin-like appearance of the surface along the edges. The globally unique and patented manufacturing process – steam coagulation – provides "Viskovita" with the following properties:

- High cleaning and absorption power
- Lower transport and storage volume
- High chemical and acid resistance
- Absorbs liquids up to 2100% of its own weight
- Two sizes available:
pressed: 115 x 32/35 mm
expanded: 135x90x34/37 mm
- All-round continuous leather-like "skin surface"
- Highly resistant and extremely durable viscose material
- washable up to 60 °C

Applications

- Applying of developer liquid on offset printing plates
- Cleaning of rubber rollers in developer machines
- Cleaning of printing-plates – remove dirt and ink
- Applying of aluminium activator on plate cylinders for regeneration
- Applying of gum on printing plates for preserving / archiving
- Removing ink and dirt from blanket-cylinders
- Cleaning of impression cylinders
- Cleaning and scouring of printing ink, scrap paper, powder of anti-marking film and transfer jackets in offset printing machines
