

Polispot Compressible 1.35

Application:

For in-line spot or flood varnishing (coating) in Offset applications long run jobs using acrylic (water based) varnishes and short run jobs using U.V. varnishes

Designed to ensure higher tolerance in the setup of pressure parameters, particularly effective when using recycled paper or any paper with uneven thickness

Advantages:

- Has the highest tolerance of the set up pressure parameters and it allows to use paper and/or polyester underpacking
- Excellent resistance to solvents and mechanical stress
- Minimal ink build-up
- Highest dimensional stability
- No "orange peel" effects on the coating
- Reusable for multiple long run without registration problems

Thanks to the polyester base
solvent free

Thickness availability (mm):

1.15 - 1.35 – 1.95
